

Clever School Signup: Aeries

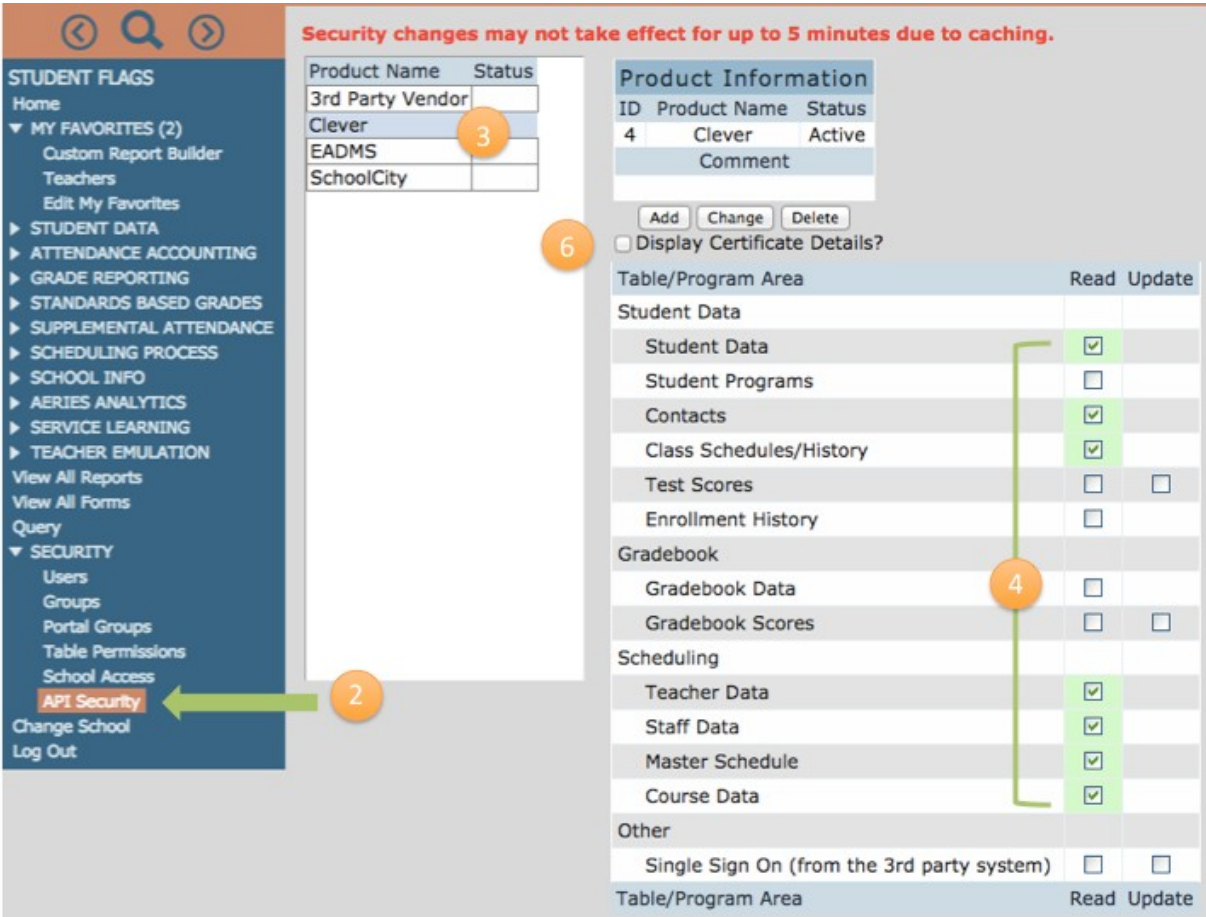

1. Introduction

Clever allows the student data in Aeries to automatically sync with authorized applications. This eliminates the need for manual CSV transfers or complicated SFTP uploads.

To allow the data sync to happen, Clever needs to be able to access the Aeries.net API. The best practice when using Clever is to create a new Aeries API certificate for the Clever sync.

2. Create an API Certificate for Clever

- 1) Log into your Aeries.net administrator account for the current school year.
- 2) Select 'Security > API Security' from the menu on the left.
- 3) Add a new certificate named 'Clever.'

- 4) Grant read permissions to all items in the Student Data and Scheduling tables.
- 5) Save the certificate.
- 6) Click 'Display Certificate Details?' and copy/paste your API certificate into the Clever signup form.

3. Clever Support
